The Fat Loss Clinic

Introducing the Z6

Laser Therapy for Fat Loss
Fat Loss Program Guide 2016

Photobiomodulation by 635nm laser light creates transitory pores in adipose cells, releasing 99% of triglycerides

(C) Global Laser 2016

All microscopic results showed that without laser exposure, the normal adipose tissue appeared as a grape-shaped node. After 4 minutes of laser exposure, 80% of the fat was released from the adipose cells, and at 6 minutes, 99% of the fat was released from the adipocytes.

Facts Sheet on Low Level Laser Therapy (LLLT) for Fat Loss

(C) Global Laser 2016

Licensed
by
Health
Canada

FDA approved and licensed by Health Canada.
Low level laser therapy for fat reduction received licensing by Health Canada on March 28th 2012

Medically
Proven
in
Clinical Trials

Research has shown that LLLT is effective in reducing overall body circumference measurements of specifically treated regions, including the hips, waist, thighs, and upper arms.

No pain.
No side effects.
Completely noninvasive.

No Pain.
No cell death.

No thermogenesis.
LLLT activates adipocyte lipolysis without damaging the adipocyte.

Clinical trials demonstrate that LLLT has long-term effects on fat reduction and body contouring.

Long Term Effects

Z6
ONLY AVAILABLE IN
OTTAWA
with Global Laser

The Z6 uses 6 x 17.25 milliWatts (mW), 635 nanometers (nm) light-emitting diodes
